                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              * NOTE: This is a 'working draft' sequence. It currently consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Center: Washington University Genome Sequencing Center
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5445: gap of unknown length

NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

COMMENT

Direct Submission

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Modecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23269619.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence can be seen and sequence contigs within a contig-scaffold that consist entirely of whole senome shotgun sequence reads. Both end sequences and whole genome shotgun sequence can be sed both the contigs will be indicated in the feature

NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. 298 478 178 418 Assembly program: Phrash version 0.990329

Mouse CXC chemokine receptor binding to PBSF/SDF-1 pre-B cell stimulatory factor - is useful for screening of potential HIV infection and AIDS inhibitors. Yoshida Tachibana K, Iizasa H, Kishimoto T, Nagasawa T, Nakajima T, Yoshie O; WPI; 1998-447232/38. P-PSDB; AAW64778.

Claim 3; Page 39-42; 76pp; Japanese.

The present sequence encodes a murine CXC chemokine receptor which binds to the mouse CXC chemokine pre-B cell stimulatory factor PBSF950F-1. The nucleic acid is isolated from mouse pre-B cell line DW34. The receptor and cells expressing it can be used in the study and mapping of the

This sequence encodes the mouse CXCR4 protein. The invention relates to remedies inhibiting neovascularisation, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of potentiating CXCR4. Based on a finding that vascularisation is inhibited in a CXCR4 knockout mouse, it becomes possible to prepare remedies inhibiting vascularisation which contain as the active ingredient a substance capable of potentiating CXCR4, remedies for solid cancer, remedies for diseases pathologically caused by neovascularisation and tissue repairing agents containing as the active ingredient a substance capable of contiaining as the active ingredient a substance with the use of these remedies

The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect. The method is useful for predicting to the progression of a toxic effect. The compound, identifying an agent that modulates the onset or progression of a toxic response, predicting the cellular pathways that a compound modulates in a cell, and identifying an agent that modulates at compound modulates in a cell, and identifying an agent that modulates at least one activity of a protein. The method and compositions of the lessent invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO can they wipo int/published\_pct\_sequences.

Determining if a compound induces a toxic effect on a tissue or cell, for identifying hepatotoxic compounds, comprises comparing a gene expression profile of a tissue or cell sample to a database of Tox mean and non-Tox WPI; 2003-731472/69.

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention. Claim 44; SEQ ID NO 3547; 874pp; English.

The present invention relates to a method for treatment or prevention of bone diseases characterised by loss of bone mass, comprises administering to a mammal a compound that lowers the level of neuropeptide Y (NPY) in the serum or cerebrospinal fluid (GSF) or a compound that lowers the level of inositol phosphare (IP) or extracellular signal-regulated kinase (ERK). The method is specifically used to treat (including by gene therapy) or prevent osteoporosis, osteopenia or Paget's disease, but may also be used e.g., in cases of fractures or bone metastases. These diseases may also be diagnosed by detecting elevated NPY levels, including monitoring of treatment, assessing efficacy of compounds in sequence is a human NPY % receptor DNA 103 Treating or preventing reduced bone mass, e.g. osteoporosis, by reducing the level of neuropeptide Y activity in blood or cerebrospinal fluid. 44 GCAGGIGCAGGIAGCAGIGACCCICIGAGGCGIITIGGIGCICCGGIAACCACCACGGCIG Gaps /\*tag= a /product= "Human neuropeptide Y (NPY) Y3 receptor" ري د Length 1679; Sequence 1679 BP; 407 A; 400 C; 368 G; 504 T; 0 U; 0 Other; Score 446.8; DB 4; Length Pred. The specification describes an antibody which is specific for an antigenic fragment of gp120. This antigenic fragment binds to DC-SIGN or is exposed upon gp120 binding of DC-SIGN due to concomitant conformational change. DC-SIGN is a receptor that is specifically expressed on dendritic cells and facilitates infection of T lymphocytes with HIV. DC-SIGN is identical to a HIV-1 gp120-binding C-type lectin. DC-SIGN binds ICAM-3 (which is expressed constitutively on T lymphocytes) with high affinity. The antibody of the invention inhibits the trans denhancement of HIV entry into a T cell or macrophage facilitated by infection. The present sequence represents a human polynucleotide, which is used in the course of the invention

Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha. P-PSDB; ABG32977

Disclosure, Fig 1; 26pp; English.

The invention describes a method of inducing chemotaxis of endothelial cells by treatment with stromal cell-derived factor lalpha (SDF1a). The method is used for trimulating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury. Inhibition of this process is useful in treatment and pacteria, fungi, protozca or viruses such as human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS), pain, cancer and bening prostatic hypertrophy, diabetes, obesity, anorexia, bulimia, asthma, Parkinson's disease, acute heart failure, hypotension, hypertrophy, mycardial infarction, stroke, ulcers, benign prostatic hypertrophy, chizophrenia, womiting, psychotic and neurological disorders (e.g. anxiety, schizophrenia) and dyskinesias (e.g. Huntingdon's disease), inflammatory diseases, theumatoid arthitis, diabetic retinopathy inflammatory bowel diseases, theumatoid arthitis, diabetic retinopathy inflammatory bowel heart failure, cardiac remodeling, angioganic diseases, solid tumours, and shoosi Sarcoma, This sequence encodes the human CXC chemokine receptor 4 (CXCR4) polynucleotide

Inducing chemotaxis of endothelial cells, useful for regulating angiogenesis, e.g. for treating cancer, comprises treatment with stromal cell-derived factor 1 alpha. Disclosure, Fig 1, 26pp, English. (SMIK ) SMITHKLINE BEECHAM CORP WPI; 2002-706230/76. P-PSDB; ABG33065. 17-SEP-2001; 21-JUL-1998; 21-JUL-1999; Gupta SK; 

The present invention relates to a new method for inducing chemotaxis of endothelial cells (EC). The method of the invention involves treatment with a strondal cell-farived factor is (SDF1alpia). The method is used for treating EC chemotaxis, and thus angiogenesis, and is used for treating atherosclerosis, restenosis, ischaemic stroke and spinal cord injury, while inhibition of this process is useful in treatment and prevention of a very wide range of diseases, e.g. infection (By bacteria, fungi, protozoa or viruses), pain, cancer and benign prostatic hypertrophy, diabetes, obesity, anorexia, bullina, asthma, allergies, carter heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, migratne, vomiting, psychotic and neurological disorders cand dyskinesias, inflammatory disoaces, theumatoid arthritis diabetic retinopathy, inflammatory bowel disease, atherosclerosis, restenosis, and dyskinesias, solid tumours, and Kaposi sarcoma. The present nucleic acid sequence encodes the human CXCR4 protein of the invention.

Identifying a gene involved in disease for treating hypoxia-regulated conditions, comprises comparing the transcriptome/proteome of two cell types under different conditions and identifying a differentially regulated gene.

Claim 37; Page 378; 538pp; English.

ש מ The present invention relates to methods for identifying genes and proteins that are implicated in a specific disease or physiological condition. The method comprises comparing the transcriptome/proteome of a specialised cell type implicated in a disease or condition with that of a second specialised cell type, under two experimental conditions, and identifying a gene that is differentially regulated in the two specialised cell types under experimental conditions. ABV77873-ABV78116 and ABP65061-ABP65257 were identified using the methods of the invention. The coding sequences and proteins are useful for treating a disease in a us-09-367-052-5.rng

patient, for manufacture of a medicament for treating hypoxia-regulated conditions, and for regulating tumourigenesis, angiogenesis, apoptosis, biological response to hypoxia conditions, or hypoxic-associated pathology in a patient. The coding sequences and proteins are also useful for monitoring the therapeutic treatment of a disease or physiological condition, such as cancer, ischaemic conditions, reperfusion injury, retinopathy, neonatal stress, preeclapmsia, atherosclerosis, inflammatory conditions, wound healing, inflammation, erythropoiesis or hair loss 88888888888888

ઠ

The present invention relates to methods and compositions for detecting an angiogenesis-associated transcript in a cell in a patient. The method involves contacting a biological sample from the patient with a polynuclectide that selectively hybridises to a sequence at least 80% identical to any of the angiogenesis-associated human polynuclectide sequences given in the specification. These angiogenesis-associated polynuclectide sequences comprise that exhibit changes in expression levels as a function of time in tissue undergoing comprises that exhibit changes in expression. Levels as a function of time in tissue undergoing in angiogenesis. The method and the polynuclectide sequences of the invention are useful for disagnosing and treating angiogenesis and angiogenesis-associated diseases e.g. cancer. The polynuclectide sequences are also useful in the gene therapy of such disorders. The majogenesis-associated for therapeutic and prophylactic immunisation. ABX08739-ABX08853 represent angiogenesis-associated by the polynuclectide sequences. Detecting angiogenesis-associated transcript in a cell for diagnosing treating cancer by contacting a sample with a polynucleotide that exhibits changes in expression level as a function of time in tissue Sequence 1679 BP; 407 A; 400 C; 368 G; 504 T; 0 U; 0 Other; z Example 2; Page 217-218; 291pp; English. New microarray, comprising a matrix of cDNA probe from a set of probes immobilized to a solid surface in predetermined order, useful in the prognosis of patients with clear cell renal carcinoma.

Claim 35; Page 132-133; 179pp; English.

The present invention relates to a microarray comprising a matrix of at least one CDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to mucleic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell renal carcinoma (CC-RCC) and that hybridise to the probes under high stringency conditions. The microarray is useful for the prognosis of patients with CC-RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene

487 원 à à ď Modulating viral infection of a cell, for treating or preventing respiratory virus infections, bronchitis, pneumonia or atchma, by modulating a binding interaction between a cell chemokine-receptor and surface protein of the virus. Disclosure; Page 117-119; 120pp; English. /product= "CXCR4" 12-AUG-2002; 2002WO-CA001248 10-AUG-2001; 2001US-0311088P (TOPI-) TOPIGEN PHARM INC 2003-256541/25. Renzi P, Zemzoumi P-PSDB; ABP97733 WO2003014153-A2 

The present sequence encodes human chemokine receptor CXCR4. The specification describes a method for modulating viral infection of a cell. the method comprises modulating a binding interaction between a cell chemokine-receptor and a surface protein of the virus. The proviso is that the cell chemokine-receptor is not CXICR1 and that the virus is not HIV. The method is useful for treating or preventing respiratory virus infection in vertebrates, more particularly respiratory syncytial virus (RSV) infections, and related diseases, e.g. bronchiolitis, bronchiolitis,

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acid acids. Also described: (1) am assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in artibody against a particular GPCR, and in the production of specific antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs. The antigenic peptides for GPCRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, immunological-related cill proliferative diseases, or autoimmune diseases, immunological-related cell proliferative atherosclerosis, bacterial, fungal, protozoan or viral infections,

osteoarthritis, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory loss, epilepsy, asthma, tuberculosis, obesity, nausea, hypetrension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis. ABZ42523 to ABZ42569 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention 886666666668888888

Use of a CXC chemokine receptor 4 (CXCR4) inhibitor, for modulating cellular adhesion or inhibiting proliferation, movement, or morphological change in a small cell lung cancer (SCLC) cell population, or for treating a subject having SCLC.

The invention relates to methods and compositions for inhibiting small cell lung cancer (SCLC) proliferation and metastasis through modulation of the activity or expression of CXC chemokine receptor 4 (CXCR4), and optionally, that of the tyrosine kinase receptor - 4 (CXCR4), and optionally, that of the tyrosine kinase receptor - 4 (CXCR4), and optionally, that of the tyrosine kinase receptor - 4 (CXCR4), and optionally, that of the tyrosine kinase receptor - 4 (CXCR4) is a CXCR4 inhibitor modulates cellular adhesion and inhibits cellular compulation. The invention is based on the finding that CXCR4 is ubjquitously expressed, and --Kit is variably expressed, in SCLC cells. The invention also discloses methods of screening for CXCR4 and is therefore amenable to CXCR4 inhibitor therapy determining whether a sample of lung cancer cells expresses CXCR4 and is therefore amenable to treatment with a combination of a CXCR4 inhibitor and a --Kit inhibitor combination of a CXCR4 inhibitor and a c-Kit inhibitor, and method of assessing whether CXCR4 inhibitor therapy or CXCR4 inhibitor combination therapy should be continued, by determining CXCR4 (and optionally --Kit) activity in two or more the methods of the invention are useful for treating SCLC, for screening cfor agents for the treatment of SCLC, for determining whether a SCLC from individual patients is suitable for treatment with agents of the invention, and for determining whether such treatment is effective and should be continued. The present sequence represents cDNA encoding human companies the continued of the invention of the invention.

New gene expression profile generated from primary, endothelial, epithelial, and muscle cell types, useful for identifying disease pathologies involving alterations of gene expression, e.g. cancer.

Disclosure; Page 609; 850pp; English

The invention relates to a gene expression profile comprising one or more genes (AB234889-AB235692) and generated from a cell type. The coll type of a coronary artery artery artery andothelium, umbilical artery or vein endothelium, accordant plant artery and artery accordant artery artery conditions and artery and artery artery endothelium, promoted artery artery endothelium, promoted artery artery artery endothelium, promoted artery artery artery artery and a airway epithelium, renal epithelium, renal proximal tubule epithelium, capithelium, renal epithelium, renal proximal tubule epithelium, ambilical artery smooth muscle, dermal fibroblast, neural progenitor cells, skeletal muscle, astrocytes, cornial smooth muscle, neural progenitor cells, skeletal muscle, astrocytes, cornial smooth muscle, uterine smooth muscle, lung fibroblast, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, coronary artery smooth muscle, action and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and artery and prognosis. The gene or protein expression profile and artery and prognosis. The gene or protein expression profile arterations of gene expression. The assessment of expression profile arteration with respect to tumour type and stage, treatment methods, and prognosis. The gene or protein expression profile artery and physical mapping of genomes, DNA sequencing, genetic or medical diagnosis, genotyping of organisms, confirming cell or tissue artifundal agents antifungal agents

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                          US-09-367-052-5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 5, Application US/09582224A
Patent No. 6429308
GENERAL INFORMATION:
APPLICANT: GOTO, Takeshi
APPLICANT: GOTO, Takeshi
APPLICANT: SHIMADA, Takashi
ITILE OF INVENTION: HIV Infection Inhibitors
FILE REFERENCE:
CURRENT APPLICANTION NUMBER: US/09/582,224A
CURRENT FILING DATE: 2000-07-21
PRIOR APPLICATION NUMBER: PCT/JP99/06534
FRIOR FILING DATE: 1999/11/24
NUMBER OF SOOF IN OF SEQ ID NOS: 5
SOFTWARE: Microsoft Word
SEQ ID NO 5
LENGTH: 1664
TYPE: DNA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
